Myself

My name is Ranu Chacko, and I was born in 1978 in Pandalam Village, Pathanamthitta district, Kerala. My basic qualification is a bachelor's degree.

From a young age, I've had a great interest in new technologies and inventions. Perhaps this inspiration came from my grandfather, who was also a keen innovator. My approach was to think differently and act differently.

When I was in eighth grade, I developed a device that could measure the water level in our home's water tank from the kitchen. Later, I invented an iron that works without electricity and a type of gas that could be used as an alternative during cooking gas shortages. I also created a multi-purpose tool for husking, breaking, and grating coconuts, and for moving stools after use. Additionally, I built an exercise machine using an old bicycle. I even developed a chemical to eliminate farm odours. I have made numerous inventions like these across various fields, always finding new technological solutions.

After completing my bachelor's degree, I moved abroad. There, I focused on jobs including computer graphic design. At that time, computer seals were typically made using machines. One day, when the machine broke down, I surprised everyone by producing high-quality computer seals manually, without machine assistance. This led me to continue making new discoveries in the advertising sector.

Recognizing my abilities, sponsor entrusted me with managing their crusher unit, which was operating at a loss. Despite my limited technical knowledge, I began repairing all the foreign machinery there. I managed to turn the company, which was incurring a loss of 5,000 Omani Riyal into a profit of 10,000 Riyal within just three months. Subsequently, I took charge as the company's manager.

Later, they transferred me to their automobile division. This was a franchise of the American company 'Precision Tune Auto Care', specializing in premium car servicing. I worked there as a Business Development Manager for about four years. During this period, I was able to increase revenue and open four new branches.

After all this, I returned home. Here, when I bought an electric scooter, its limited range became a significant inconvenience whenever I needed to travel more than 65 kilometres. To solve this problem, I conducted research for three years. Although I built four devices, they had some limitations. Then, experimenting with new technologies, after three years of intense research, I developed an optimal device to solve this problem. Its specialty is that no matter how far you travel, only 40% of the battery will be depleted. This technology operates on the principle of renewable energy and is not complicated.

I believe this will be helpful for your industrial advancement.

I'll stop here for now. If you are interested, we can meet in person. Please contact me at the Phone number or email below.

VIRTUAL STREET

The New Face of Shopping and Services

Virtual Street' is the latest technological innovation conceptualized by Ranu Chacko of R3 Technologies. It is a revolutionary application designed to bring businesses and services from every village and city in India under a single umbrella.

What is Virtual Street ?

It is a platform that allows you to utilize all local services—or services in any other city you desire—through virtual graphics, without having to travel there physically. When you open the application, you can view your target area on the screen just like watching a video. A virtual 'Avatar' will represent you and carry out tasks on your behalf. Everything we typically do by physically going to a city can now be done virtually through this application.

Key Features of the Application

Real-time Virtual Experience:

Customers get the exact sensation of visiting a shop or walking down a street through immersive virtual graphics.

All Services at Your Fingertips:

Through your avatar, you can hail a vehicle from a taxi stand, buy groceries like rice or sugar from a wayside store, or purchase fresh produce from a vegetable vendor.

Home Delivery System:

As soon as you complete a purchase and make the payment an alert is sent to a nearby delivery executive who will deliver the items to your doorstep (an extra delivery fee applies).

A Space for Everyone:

The platform is designed to be accessible and beneficial for everyone, from small street vendors to large-scale business enterprises. Products from any city or village in India can be purchased here. Business Opportunities

Lead Generation:

Customers can register their specific needs by simply pressing a button in the app.

This data reaches the app's central hub, where it is filtered and forwarded to the most suitable businesses. This tool provides a massive profit opportunity for lead generation companies and large-scale enterprises alike.

Virtual Space :

The platform provides entrepreneurs with a dedicated virtual space to market their products and services from any corner of the globe. In short, all businesses and services will now be brought under a single digital roof.

Just like the widespread adoption of Google Pay, business owners will eventually find it essential to be a part of this ecosystem.

Expected Monthly Revenue Calculation (Kerala State Only)

(Assuming an average of 10,000 shuttered shops per district)

Revenue Stream Calculation Breakdown Expected Amount (in Lakhs)

Rent Income 6,000 shops × ₹700 (per district) = 42 Lakhs.

42 Lakhs × 14 districts = ₹ 588 Lakhs

Leads Income 20,000 leads × ₹1,000 = ₹ 200 Lakhs

Digi Space Income 5,000 users × ₹5,000 = ₹250 Lakhs

Per Monthly Income = ₹ 1038 Lakhs

Expanse per month expected 26 lakhs

(80 labour salary Rs 25000 each Rs 20 lakhs & other exp 18 lakhs Misilanus)
